**TORNADO SEASON**

Know the signs & listen for alerts

Take shelter in a sturdy building

Get low & protect your head

**WATCH**  
Tornado potential.  
Stay alert

**WARNING**  
Tornado spotted.  
Act now.

## Tornado Season

Tornado season has arrived, and it runs through September. #BePrepared and know the facts and preparedness measures to take:

- Most tornadoes develop in the late afternoon and early evening;
- They are often hard to see from far away and may not have a visible funnel cloud;
- They usually come from the south or west but can change direction quickly.

If disaster strikes, shelter in place by moving quickly and calmly to a room in the basement or lowest floor that is away from windows. If you are outside, seek shelter in a sturdy building or get out of your vehicle, crouch low to the ground and cover your head. Do not take shelter underneath a bridge or overpass.

Downloading the *SaskAlert* app now can provide you critical, lifesaving alerts when tornadoes and severe storms occur.
